

## The perfect Immersion Blenders for commercial catering

Among its five product ranges including a total of 21 different Immersion Blenders, Robot-Coupe has developed its CMP Compact range to meet the most exacting requirements!

CMP Compact Immersion Blenders are now equipped with an ergonomic handle for greater user comfort, stainless steel motor housing for greater sturdiness and a support lug for easier handling. They are also equipped with the EasyPlug patented power cord, which can be replaced in just 5 seconds, a Robot-Coupe exclusivity that created a revolution when it was first added to its MP Large Immersion Blenders in 2014!

Already compact and light and designed for irreproachable hygiene (removable bell and blade), CMP Compact Immersion Blenders are sturdier, more comfortable and easier to repair than ever before.

These are significant benefits in kitchens with small teams who have to prepare 15 to 45 litres of soup, sauces and purees every day, and even several times a day.

As always, Robot-Coupe makes it a priority to constantly develop and improve its products.
